

Year: 2019-2020

Project Title: FUTURE GREEN 20.30 "A GREEN FUTURE FOR THE BASSA ROMAGNA 20.30 "

Leader: Union of Municipalities of Bassa Romagna

Description of the project:

"A green future for Bassa Romagna" was born as an ambitious framework project that intends to support the planning and design processes related to the Energy Plan and the activities envisaged by the 'PAES' of Bassa Romagna, after the adoption of Mayors, with a path of value creation on the theme of energy saving and the reduction of CO2 emissions, in line with the goals then set by the 2030 Agenda. The long-term general goal is to spread a new sensitivity and to influence, consequently, on people's lifestyles and businesses in Bassa Romagna responding to a need for knowledge on issues related to energy saving, sharing culture, more sustainable lifestyles and the identification of projects and services that can help to root a greater awareness of the environment in guiding the thread across the issues, projects and green policies with a mainly "cultural" aim, attributing a fundamental value to language simplification, coherent identity and thematic professional trainings to achieve the 2030 Agenda Goals. The project activities, started in 2013, have never stopped and are constantly evolving and updated in line with the provisions of the new planning and regulatory lines and with the new objectives of the 2030 agenda. In this regard, the Green Future project, it renews itself in the technical contents, but not in its nature of wanting to involve citizens in a conscious and rooted knowledge of new, more sustainable lifestyles.
