l'Energia e lo Sviluppo Economico Sostenibile*

Bologna, 18 Marzo 2019

# Il cambiamento climatico: un problema urgente

## Anomalia e andamento delle temperature globali dal 1800 al 2013, in °C

Differenza dalla media 1951-1980

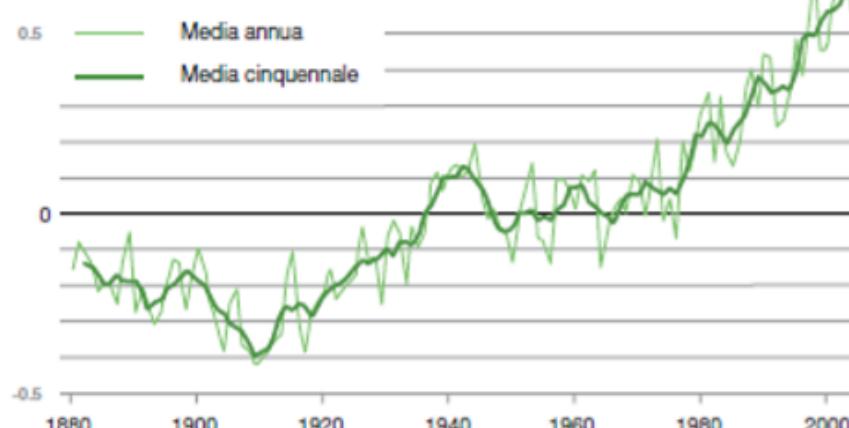

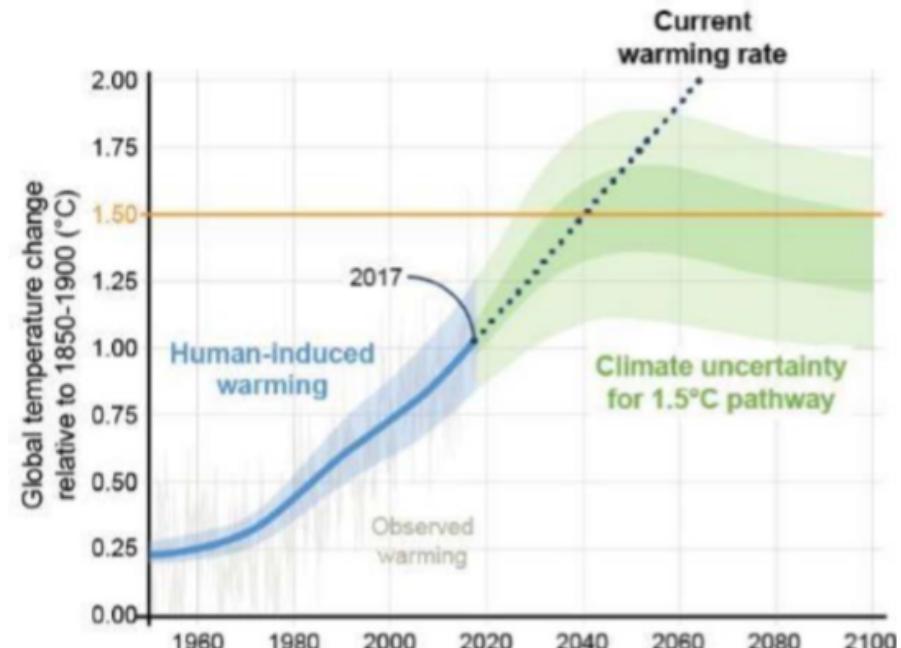

Grafico basato su dati del Goddard Institute for Space Studies, GISS, della NASA.

**Accordo di Parigi:** Mantenere l'aumento della temperatura media globale **ben al di sotto dei 2 gradi** e perseguire tutti gli sforzi necessari per **limitare l'aumento di temperatura a 1,5 gradi** rispetto ai livelli pre-industriali, riconoscendo che questo ridurrebbe significativamente i rischi e gli impatti del cambiamento climatico

## FAQ1.2: How close are we to 1.5°C?

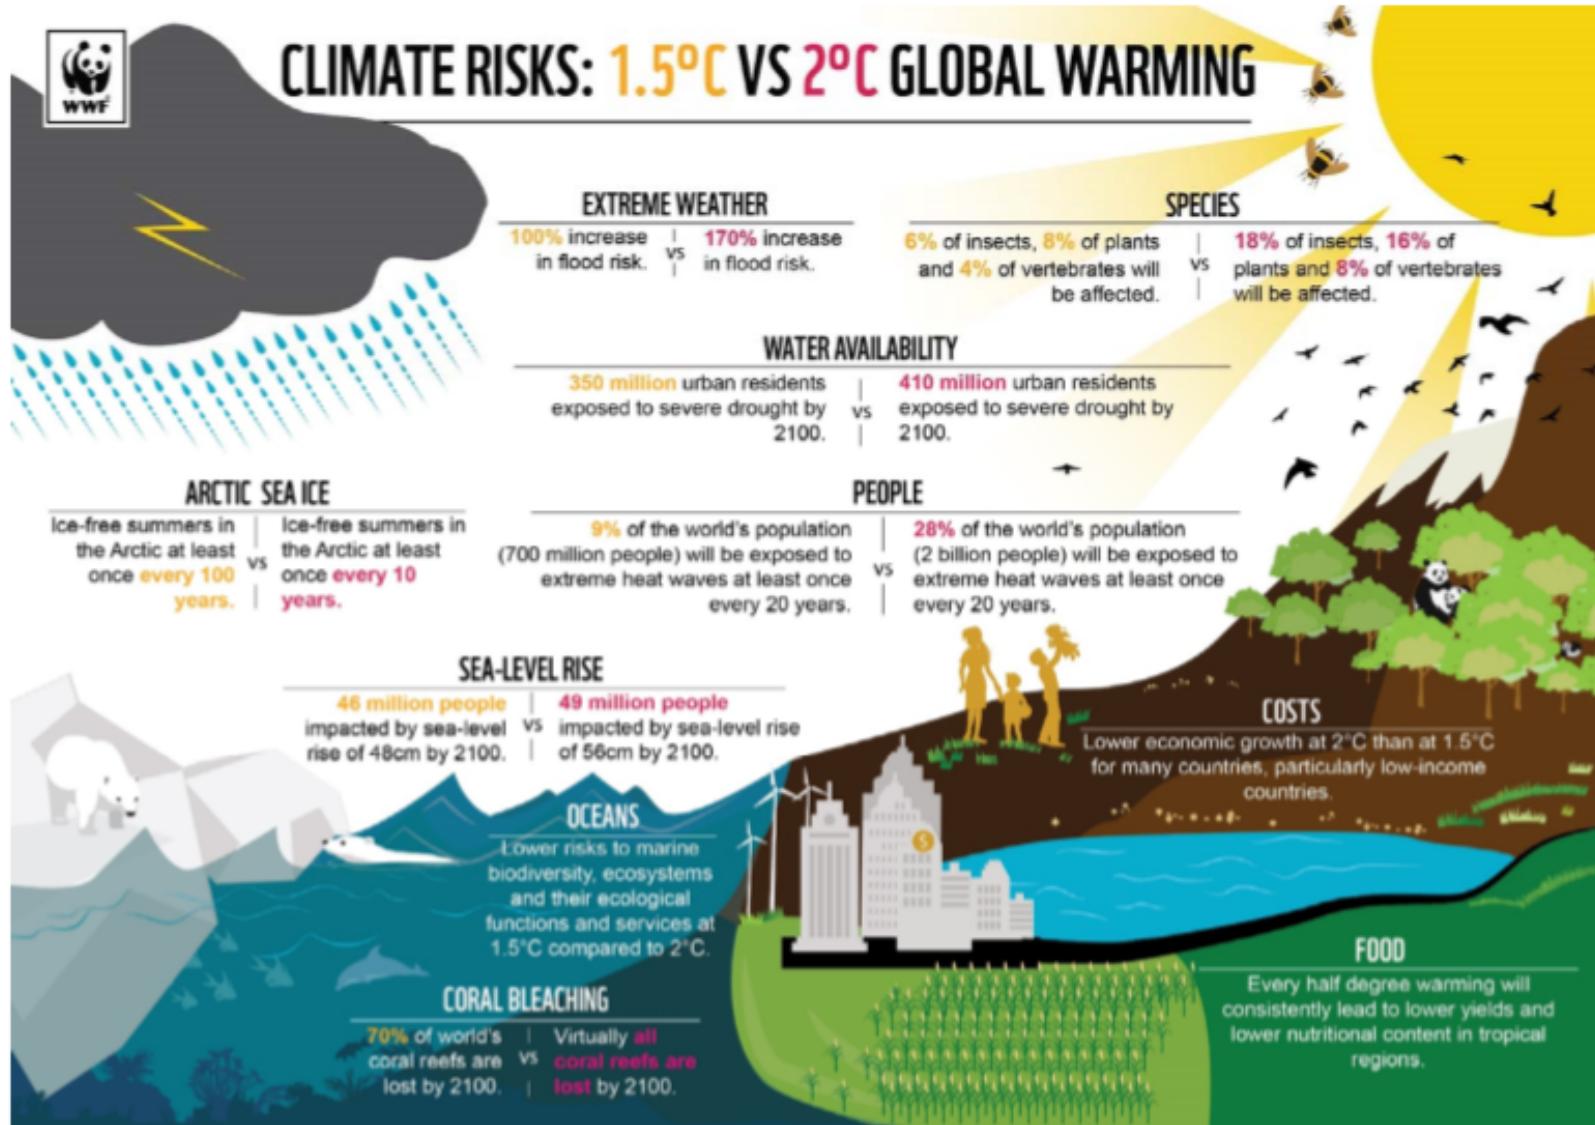

Human-induced warming reached approximately 1°C above pre-industrial levels in 2017

FAQ1.2, Figure 1: Human-induced warming reached approximately 1°C above pre-industrial levels. At the present rate, global temperatures would reach 1.5°C around 2040.

Inoltre, **entro il 2050**, i Paesi Membri dovranno facilitare la trasformazione degli edifici esistenti in **edifici a energia quasi zero**, a partire dagli edifici della *Pubblica amministrazione*, che viene invitata ad assumere un ruolo **“esemplare”**.

## Quadro per il clima e l'energia 2030

- una riduzione almeno del **40%** delle **emissioni di gas a effetto serra** (rispetto ai livelli del 1990)
- una quota almeno del **27%** di **energia rinnovabile**
- un miglioramento almeno del **32%** dell'**efficienza energetica** (aggiornamento del 2018)

## Parole chiave

- **Efficienza Energetica**
- **nZEB**

# I progetti: TEESCHOOLS e FEEDSCHOOLS

## TEESCHOOLS

- *Transferring Energy Efficiency in Mediterranean SCHOOLS* (Teeschools) ha l'obiettivo di sviluppare una **strategia integrata** per i Paesi del Mediterraneo che semplifichi **il processo di riqualificazione degli edifici pubblici scolastici** fornendo **strumenti** e favorendo la realizzazione di edifici scolastici **nZEB (Nearly Zero Energy Building)**
- Durata progetto: **36 Mesi** (dal 01/02/2017 al 31/01/2020)
- Consorzio del progetto: **11 partner** provenienti da **7 paesi** (6 MED + 1 IPA) Italia, Grecia, Spagna, Cipro, Croazia, Francia e Bosnia Erzegovina
- Tipologia: **Testing + Capitalization**

## FEEDSCHOOLS

- *Financing Energy and Environment in Schools* (Feedschools) vuole costruire uno strumento integrato (**2 App + 1 Database**) per la riqualificazione energetica ed ambientale degli edifici scolastici *nell'Europa Centrale* con un focus specifico sugli **nZEB**.
- Durata del progetto: **36 mesi** ( Settembre 2017 – Agosto 2020)
- Consorzio del progetto: **11 partner** e **7 paesi** (Italia, Repubblica Ceca, Ungheria, Polonia, Austria, Croazia, Slovenia)

# TEESCHOOLS: Obiettivi ed Output

- ✓ Testare e convalidare **uno strumento** dedicato ad *audit energetici* semplificati;
- ✓ Calcolare **l'impronta ecologica** dei progetti di rinnovamento
- ✓ Realizzare un inventario delle “**Migliori Tecnologie Disponibili**” (BAT Database) per la ristrutturazione degli edifici scolastici *nZEB*;
- ✓ Realizzare **piani di rinnovamento** degli edifici scolastici pilota
- ✓ Studiare **strumenti di finanziamento** innovativi al fine di facilitare la concreta realizzazione dell'intervento.
- ✓ **E-learning** e corsi in aula per professionisti, ricercatori ed amministratori locali sulle tematiche del progetto
- ✓ **Raccomandazioni politiche** da integrare nei piani di azione locali, regionali, e nazionali sfruttando i network di appartenenza dei differenti partner (Patto dei Sindaci...ecc...);

# WEB TOOL: Pre-Audit semplificato

Lo strumento on-line è user-friendly (si presenta anche come APP) e misura:

- *Il profilo energetico dell'edificio*
- *Le opzioni di interventi migliorativi*
- *Carbon Footprint (l'impronta di carbonio) degli interventi migliorativi*
- *Una valutazione dei principali indicatori economici dell'investimento (VAN, TIR, Tempo di Ritorno)*

The EU 2030 climate and energy framework sets three key targets for the year 2030: at least 40% reduction in greenhouse gas (GHG) emissions (from 1990 levels), a 27% cut in energy consumption through improved energy efficiency and a 27 % increase in the use of renewable energy. In this framework renovation of buildings emerges as an urgent issue, but there is lack of knowledge on performance/cost characteristics of advanced component and systems for efficient renovation of buildings. Moreover, while incentives are given to private sector, public sector faces severe limitations of budget.

TEESCHOOLS project aims at providing an integrated set of user-friendly but scientifically sound tools to support Public Authorities to approach Nearly-Zero Energy Building (nZEB) renovation in Mediterranean Schools.

The set of the user-friendly tools contains:

- a simplified energy and environmental audit tool composed of two modules:
  - Energy profile module of the building: It calculates the energy index of the school building and estimates its energy performance
  - Renovation Options module: it calculates the potential energy and CO<sub>2</sub> savings of the school building and helps in selecting the most promising renovation options

Check how by clicking NEXT.

## ☹ Below average

Not good, you **NEED** to improve  
Check how by clicking NEXT.

To reach **nZEB** classification the COMMISSION RECOMMENDATION (EU) 2016/1318 suggests the following indicators for Mediterranean area:

Offices and Schools: **20-30 kWh/(m<sup>2</sup>\*y)** of net *primary energy* with, typically, **80-90 kWh/(m<sup>2</sup>\*y)** of *primary energy* use covered by **60 kWh/(m<sup>2</sup>\*y)** of on-site renewable sources;

## Carbon Footprint

### RESULTS

The table below shows the potential CO<sub>2</sub>e\* savings associated to the type of energy source used for the heating system. As an example, potential savings in CO<sub>2</sub>e\* are compared to the distance covered by a school bus carrying 45 students.

Total THERMAL Energy Saved: 91,565 [kWh]

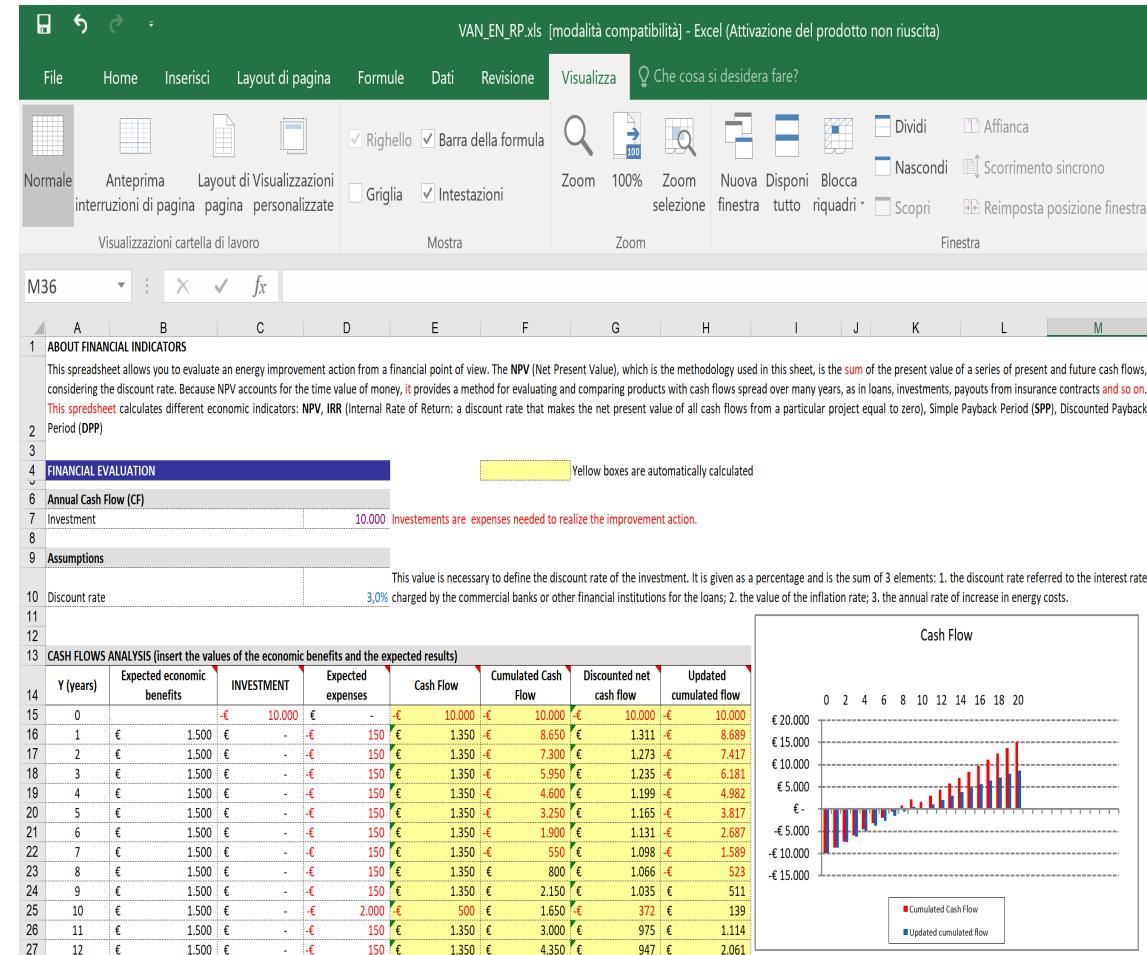

Fuel	Carbon Footprint	kg CO <sub>2</sub> e*	km Schoolbus
Methane gas	24,265	5,392	
Diesel	28,019	6,226	
Fuel Oil	28,898	6,422	
L P G	27,836	6,186	
Firewood	38,457	8,546	
Coal	34,886	7,752	
Electric energy	38,640	8,587	

Total ELECTRIC Energy Saved: 0 [kWh]

Fuel	Carbon Footprint	kg CO <sub>2</sub> e*	km Schoolbus
Electric energy	0	0	

\*Emissions are all expressed in kg of CO<sub>2</sub>e (equivalent) calculated according to IPCC method.
